

Product: Mastertac Alu-Foil Floor Graphic

Category: Sign, Display & Digital

1. Mastertac Alu-Foil Floor Graphics can be stuck to most outdoor surfaces including asphalt, textured concrete, pavers etc. Avoid smooth surfaces like tiles as it will be difficult to remove.
2. Do not install on wet or even slightly damp surface - it will not stick. If the surface is wet, allow surface to dry completely before attempting.
3. Sweep the ground thoroughly before installing - little stones will pierce the foil if left underneath.
4. Remove rear liner, position on ground then smooth hand across the print from centre outwards. If any stones are felt by hand then peel back foil and remove.
5. Final step, strike the foil with a stiff bristle broom firmly all over the surface. This pushes the foil into textured surface and ensures more contact to the surface. This is super important and should not be rushed. Don't use a soft bristle broom as this is useless. The only thing that works will be a stiff bristle broom. See demonstration video >> <https://youtu.be/n2R5t4YSrFk>
6. Removal is undertaken by simply peeling the media off the surface. You may need a Stanley knife to prise up an edge. Once you have an edge to hold onto slowly peel off trying not to tear the foil - lift in one piece if possible.
